Recombinant Human EGF

(Epidermal Growth Factor)
Catalog Number: 100-26
Accession Number: P01133

## Specifications and Uses:

Alternate Names: Urogastrone, URG

## Description:

Epidermal Growth Factor (EGF) is a growth factor that stimulates the proliferation of epithelial and epidermal cells. EGF family members are characterized by three intramolecular disulfide bonds and can bind to four different receptor tyrosine kinases known as EGFR/ErbB1, ErbB2, ErbB3, and ErbB4. Recombinant human EGF is a single, non-glycosylated protein containing 53 amino acids, with a molecular weight of 6.2 kDa .

Source: E.coli

Physical Appearance: Sterile filtered white lyophilized (freeze-dried) powder.

## Formulation and Stability:

Recombinant human EGF is lyophilized with no additives.
Lyophilized product is very stable at $-20^{\circ} \mathrm{C}$. Reconstituted material should be aliquoted and frozen at $-20^{\circ} \mathrm{C}$. It is recommended that a carrier protein $(0.1 \%$ HSA or BSA) is added for long term storage.

## Reconstitution:

Centrifuge vial before opening. When reconstituting the product, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution. It is recommended to reconstitute the lyophilized product with sterile water at a concentration of $0.1 \mathrm{mg} / \mathrm{mL}$, which can be further diluted into other aqueous solutions.

Protein Content and Purity (typically $\geq \mathbf{9 5 \%}$ ) determined by:
HPLC, Reducing and Non-reducing SDS-PAGE, UV spectroscopy at 280 nm

## Endotoxin Level:

Measured by kinetic LAL analysis and is typically $\leq 1 \mathrm{EU} / \mu \mathrm{g}$ protein.

## Biological Activity:

The activity is determined by the dose-dependent proliferation of murine BALB/c 3 T 3 cells and is typically between 20-100 $\mathrm{pg} / \mathrm{mL}$.
