# Certificate of Analysis and Data Sheet Recombinant Human Hepatocyte Growth Factor 

## Catalog No.

228-10704

Source:<br>CHO Cells

## Synonyms

Scatter Factor (SF), Hepatopoietin (HPTA), HGF

## Introduction

Hepatocyte Growth Factor (HGF) is a multifunctional growth factor which regulates both cell growth and cell motility. It exerts a strong mitogenic effect on hepatocytes and primary epithelial cells. HGF synergizes with Interleukin-3and GM-CSFto stimulate colony formation of hematopoietic progenitor cells in vitro and may, therefore, also modulate hematopoiesis.

## Description

Hepatocyte Growth Factor Human Recombinant produced in CHO is a heterodimer, non-glycosylated, polypeptide chain consisting of an $\alpha$-chain of 463 amino acids and b-chain of 234 amino acids and having a total molecular mass of 75 kDa .
The HGF is purified by proprietary chromatographic techniques.

## Physical Appearance

Sterile Filtered White lyophilized (freeze-dried) powder.

## Formulation

The protein was lyophilized from a concentrated ( $1 \mathrm{mg} / \mathrm{ml}$ ) solution containing Phosphate-Buffered Saline with $0.02 \%$ Tween 80, pH 7.4.

## Solubility

It is recommended to reconstitute the lyophilized Hepatocyte Growth Factor in sterile $18 \mathrm{M} \Omega-\mathrm{cm} \mathrm{H}_{2} \mathrm{O}$ not less than $100 \mu \mathrm{~g} / \mathrm{ml}$, which can then be further diluted to other aqueous solutions.

RayBiotech, Inc.

3607 Parkway Lane suite 200

## Purity

Greater than $97.0 \%$ as determined by:
(a) Analysis by RP-HPLC.
(b) Analysis by SDS-PAGE.

## Biological Activity

The ED50, calculated by the dose-dependant proliferation of monkey $4 \mathrm{MBr}-5$ indicator cells was found to be $20-40 \mathrm{ng} / \mathrm{ml}$ corresponding to a Specific Activity of $25,000-50,000 \mathrm{IU} / \mathrm{mg}$.

## Amino Acid Sequence

Agrees with the sequence of native human HGF.

## Protein Content

Protein quantitation was carried out by two independent methods:

1. UV spectroscopy at 280 nm using the absorbency value of 1.83 as the extinction coefficient for a $0.1 \%(1 \mathrm{mg} / \mathrm{ml})$ solution. This value is calculated by the PC GENE computer analysis program of protein sequences (IntelliGenetics).
2. Analysis by RP-HPLC, using a calibrated solution of HGF as a Reference Standard.

## Stability

Lyophilized Hepatocyte Growth Factor although stable at room temperature for 3 weeks, should be stored desiccated below $-18^{\circ} \mathrm{C}$. Upon reconstitution HGF should be stored at $4^{\circ} \mathrm{C}$ between 2-7 days and for future use below $-18^{\circ} \mathrm{C}$.
For long term storage it is recommended to add a carrier protein ( $0.1 \%$ HSA or BSA).
Please prevent freeze-thaw cycles.
