

PLX112B High Frequency Mobile C-arm System

The equipment is high frequency mobile surgical X-ray machine. It is used for X-ray fluoroscope and photography in clinical applications.

Feature:

1. High frequency high voltage generator assembly
2. Integrated three-view intensifier from Toshiba (ordinary intensifier is also available)
3. Pillar-shape parameter display, user-friendly liquid crystal graphical interfaces
4. Mechanical movement, image-manipulation, parameter-modulation, pattern-selection can be operated remotely
5. Extendable electric auxiliary arm, not only save space but also improve the stability of the device.
6. Well-organized structure, ease of maintenance
