# Human Cord Blood CD34+ Cells Derived Endothelial Cells 

## ORDER INFORMATION

Name of Cells: Human Cord Blood CD34+ Cells Derived Endothelial Cells (HCBCD34ECs)
Catalogue Number: cAP-0024
Product Format: Proliferating culture
Cell Number: $\quad>90 \%$ confluent ( $>5 \times 10^{5}$ cells) in T25 flask

## General Information

HCBCD34ECs (cAP-0024) are derived from CD34 positive cells from human cord blood cultured under endothelial cell inducing medium. The cells are shipped in proliferating culture with >90 confluence (the cells are provided @ passage 3). ENDO-Growth medium (contains 5\% serum and growth supplements, Cat\# cAP-02) is recommended for cell culture and these cells have an average population doubling capacity $>16$ when cultured following the detailed protocol described below).

## Characterization of the cells

Cytoplasmic VWF / Factor VIII: $\quad>95 \%$ positive by immunofluorescence
Cytoplasmic uptake of Di-I-Ac-LDL: $\quad>95 \%$ positive by immunofluorescence
Cytoplasmic PECAM1
$>95 \%$ positive by immunofluorescence
HCBCD34ECs are negative for HIV-1, HBV, HCV, and mycoplasma.

## Product Use

HCBCD34ECs are for research use only.

## Shipping status

Proliferating cells in T25 flask.

## Handling of Arriving Cells

When you receive the cells, leave the flask in $37^{\circ} \mathrm{C} \mathrm{CO} 2$ incubator for 1 hour first, and then replace the transport medium with fresh ENDO-Growth medium. Let the cells grow for 24 hours before subculture.

## 1. Subculture Protocol:

A) Coating T25 flasks: Add $2 \mathrm{ml} 0.1 \%$ Quick Coating Solution (cAP-01) into one T25 flask and make sure whole surface of the flask is covered with the coating solution. Five minutes later, dispose Quick Coating Solution by aspiration and the flask is ready to be used (no need for overnight incubation when coated with Quick Coating Solution).
Contact \& Ordering Information: Angio-Proteomie, 11 Park Drive, Suite 12, Boston, MA 02215, USA. Fax: (480) 247-4337, angioproteomie@gmail.com

B) Rinse the cells in T25 flask with 5ml PBS (Room Temperature, RT) twice.
C) Add 2 ml of Trypsin/EDTA (RT) (Invitrogen Catalogue number: 25300-062) into T25 flask (make sure the whole surface of the T25 flask is covered with Trypsin/EDTA), and gently dispose the Trpsin/EDTA solution within 10 seconds with aspiration.
D) Leave the T25 flask with the cells at RT for 1 minute (the cells will normally come off the surface within 1 minute).
E) Suspend the cells with 20 ml of ENDO-Growth medium and the cell suspension is transferred directly into 4 x pre-coated T25 flasks ( 5 ml each, and the cells are subcultured at 1:4 ratio)

## (Note: No need spin the cells during the subculture process).

## 2. Cell culture protocol (proliferating):

A) Culture medium (ENDO-Growth medium) is changed every 2 days.
B) The cells normally become confluent within 7 days (when split at a 1:4 ratio).

## 3. Preparation of quiescent cells:

A) ENDO-Basal medium (cAP-03) containing $0.5 \%$ FBS is used to induce quiescent endothelial cells (after 18-24hours).

Other products needed:

| Items | Company | Cat \# |
| :--- | :---: | :---: |
| Quick Coating Solution | Angio-Proteomie | cAP-01 |
| ENDO-Growth medium | Angio-Proteomie | cAP-02 |
| ENDO-Basal medium | Angio-Proteomie | cAP-03 |
| ENDO-Growth Supplement | Angio-Proteomie | cAP-04 |
| PBS | Invitrogen | 10010 |
| Trypsin/EDTA | Invitrogen | $25300-062$ |

[^0]
[^0]:    Caution: Handling human derived products is potentially bioharzadous. Although each cell strain tested negative for HIV, HBV and HCV DNA, diagnostic tests are not necessarily $100 \%$ accurate; therefore, proper precautions must be taken to avoid inadvertent exposure. Always wear gloves and safety glasses when working these materials. Never mouth pipette. We recommend following the universal procedures for handling products of human origin as the minimum precaution against contamination.
